

# Navigating Cell Tower Regulations

## A workshop presented by Jonathan L. Kramer, Esquire

As cellular technology advances and the amount of data being transmitted wirelessly increases, cell companies are scrambling to continue to provide service to their customers. Alameda County is hosting an informational workshop on the regulation of cell towers and the role of local government in the permit process.

- Who regulates radio frequency emissions from cell towers?
- What do local governments consider when reviewing applications for cell towers?
- How does cellular technology work?
- Are radio frequency emissions the same as microwave radiation?

## Who should attend?

Members of the community, planning commissioners, advisory board members, public jurisdiction and local government staff who wish to better understand cell phone technology and regulations

*Jonathan L. Kramer is the principal attorney at Telecom Law Firm, which specializes in the provision of legal and technical expertise in the wireless, broadband, and telephony sectors. Mr. Kramer is not affiliated with any cell phone, cable TV service providers.*
