

**NEO-NATAL RESUSCITATION (# 7313)**

- **Pediatric Routine Medical Care**
- Resuscitation should be initiated on **all** premature infants who meet the following criteria:  
**Weight:** > 500 gms or 1 pound and **Gestational Age:** ≥ 20-24 weeks.
- If naloxone considered for persistent respiratory depression, HR and color must first be restored.
- Avoid naloxone for neonates whose mothers are suspected of long-term exposure to opioids.
- **Note:** Perform endotracheal intubation only if BVM ventilation is unsuccessful or impossible
- **Use a length-based resuscitation tape to determine pediatric drug doses if possible.**  
 (Shown underlined on the algorithm) If not, use the formulas in the algorithm to calculate doses.
