### Potential cooling strategies

*Brainstorm a range of strategies that would cool communities. There are no bad ideas in brainstorming!*

Approaches could include policy or plan amendments/uploads, engineering/technical solutions, or neighborhood efforts. Strategies could be at the scale of a single development, a neighborhood, or all unincorporated areas.

- 

As a group, pick **two** of the strategy ideas to develop further and share with the group. Use one blue worksheet per idea.
<table>
<thead>
<tr>
<th><strong>What is the cooling strategy idea?</strong></th>
</tr>
</thead>
</table>

| **How will this idea contribute to cooling? What are any co-benefits?** | Co-benefit area may include health, environment, cost reduction, equity, or quality of life. |
|-----------------------------------------------------------------------|

| **What are the potential barriers? What affects feasibility?** | Consider technical, economic, infrastructure, and political factors. |
|---------------------------------------------------------------|

| **What would it take to implement this idea in Alameda County?** | How would it happen? Would it be represented in policies or plans? (If so, you may want to note specific documents.) |
|------------------------------------------------------------------|

| **How could you scale this idea or maximize impact?** | Possibilities include expanding a pilot, expanding uptake or participation, and sharing the model. |
|---------------------------------------------------------|

| **WHO can make this idea happen? Who could support or help?** | Consider potential partners broadly: within and outside the County, in public and private sectors, and community stakeholders. |
