Turn right (east) on Tesla Road and travel approximately 2.25 miles to the Beyer Ranch property located adjacent to the south side of Tesla Road.

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The PG&E double-footed high-voltage transmission line first appears on 1949 aerial photographs. The PG&E transmission line and distribution system was originally designed as a one-way channel that delivered electricity from the point of generation to the point of consumption. The double-footed PG&E high-voltage transmission line is supported by steel lattice towers. It is unknown but considered highly likely that the transmission line has been previously recorded, although not at this location.
