Comments: This certification was confirmed by a report prepared by the Auditor
General. The Auditor General conducted an audit of the Department's
records to confirm a list of sites where the Department was involved
in the cleanup and the cleanup had been completed. This Auditor
General list became the basis for our historical certification
information. Many of the sites on this list were handled by our
Surveillance and Enforcement Staff. Much of this work was in response
to complaints from the public or reports from industry and the
response action may have only addressed the immediate problem and not
the entire facility.

Alternate Address: 1218 24TH STREET

Background Info: A single-story brick warehouse building constructed sometime between 1912 and 1930 occupies a majority of the 0.13-acre site property. The use of the building prior to 1958 is unknown. The current owner of the site property has been the Northwestern Venetian Supply Company (Northwestern) since 1958. Northwestern manufactured and painted metal blinds onsite from 1958 until July 1987 using chemicals that included oil-based paints, lacquers, thinners, and the volatile organic compounds (VOCs) trichloroethylene (TCE) and 1,1,1-trichloroethane (1,1,1-TCA). The property appears to have been vacant between the late 1980s and 2001. An ornamental iron gate manufacturer then leased and conducted operations onsite from 2001 to 2004. The chemical use(s) associated with the ornamental iron gate manufacturer is unknown. The property has remained vacant since February 2004.

Description: A single-story brick warehouse building constructed sometime between 1912 and 1930 occupies a majority of the 0.13-acre site property. The use of the building prior to 1958 is unknown. The current owner of the site property has been the Northwestern Venetian Supply Company (Northwestern) since 1958. Northwestern manufactured and painted metal blinds onsite from 1958 until July 1987 using chemicals that included oil-based paints, lacquers, thinners, and the volatile organic compounds (VOCs) trichloroethylene (TCE) and 1,1,1-trichloroethane (1,1,1-TCA). The property was vacant between the late 1980s and 2001. An ornamental iron gate manufacturer then leased and conducted operations onsite from 2001 to 2004. The Site is currently used for a creative metal fabricating business. The Site is currently under an order to resolve groundwater data gap. (YS 08/14/2018)

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/28/2015
Comments: The Preliminary Endangerment Assessment (PEA) report documented site conditions related to historical industrial usage of the site which included a lumber mill, bottle washing operations, warehouse, garbage truck storage, and current usage as a storage facility. The report documented that surface soils contained elevated levels of polynuclear aromatic hydrocarbons (PAHs) which may have occurred via air deposition (from nearby historical manufactured gas plant operations) and the metal lead possibly related to historical residences or industrial operations. The report recommended placement of a Land Use Covenant (LUC) on the property to restrict future usage of the site to industrial usages. Other environmental issues were investigated from 1989-2015 which did not find significant contamination including: an asbestos manufacturing, an underground storage tank (UST), industrial piping, and former sumps.

Completed Date: 02/01/2022

Comments: The Revised Report summarizes (i) indoor/outdoor air sampling and sub-slab probes installation and sampling activities conducted in October 2020 and July 2021; (ii) findings; (iii) human health screening evaluation; and (iv) conclusion and recommendations. The October 2020 and July 2021 indoor air sampling events documented in the Revised Report informed presence of tetrachloroethene (PCE) in indoor air with concentrations above the DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 modified screening level for commercial/industrial air of 2 micrograms per cubic meter (g/m3) (cancer endpoint; potential cancer risk). Based on the October 2020 and July 2021 indoor air/sub-slab soil gas sampling results, DTSC assessed that volatile organic compound (VOC) reported as sub-slab soil gas and present in indoor air with concentrations above its respective federal and state screening levels has high potential for vapor intrusion and exposure to onsite commercial workers. DTSC HERO concurs with Revised Report s estimates of potential risk and hazard for current and future Site workers to be in the risk management range of 10-6 to 10-4, with cumulative potential cancer risk for Site s primary chemicals of concern to be in the range of 2x10-6 to 9x10-6 and potential hazard to be 0.08 to 0.7. DTSC HERO supports the Revised Report s recommendation for further action to protect current and future commercial receptors at the Site. DTSC Site Mitigation and Restoration Program supports the Revised Report s recommendation to implement an interim sub-slab vapor intrusion mitigation system (VIMS) at the Site. The purpose of the recommended interim VIMS is to eliminate subsurface vapor contaminant entry into the Site s building indoor air until the subsurface contamination source (e.g., PCE) is remediated or no longer poses a significant risk to human health.

Comments: The Revised Report summarizes (i) indoor/outdoor air sampling and sub-slab probes installation and sampling activities conducted in October 2020 and July 2021; (ii) findings; (iii) human health screening evaluation; and (iv) conclusion and recommendations. The October 2020 and July 2021 indoor air sampling events documented in the Revised Report informed presence of tetrachloroethene (PCE) in indoor air with concentrations above the DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 modified screening level for commercial/industrial air of 2 micrograms per cubic meter (g/m3) (cancer endpoint; potential cancer risk). Based on the October 2020 and July 2021 indoor air/sub-slab

soil gas sampling results, DTSC assessed that volatile organic compound (VOC) reported as sub-slab soil gas and present in indoor air with concentrations above its respective federal and state screening levels has high potential for vapor intrusion and exposure to onsite commercial workers. DTSC HERO concurs with Revised Report s estimates of potential risk and hazard for current and future Site workers to be in the risk management range of 10⁻⁶ to 10⁻⁴, with cumulative potential cancer risk for Site s primary chemicals of concern to be in the range of 2x10⁻⁶ to 9x10⁻⁶ and potential hazard to be 0.08 to 0.7. DTSC HERO supports the Revised Report s recommendation for further action to protect current and future commercial receptors at the Site. DTSC Site Mitigation and Restoration Program supports the Revised Report s recommendation to implement an interim sub-slab vapor intrusion mitigation system (VIMS) at the Site. The purpose of the recommended interim VIMS is to eliminate subsurface vapor contaminant entry into the Site s building indoor air until the subsurface contamination source (e.g., PCE) is remediated or no longer poses a significant risk to human health.

Comments: Terraphase Engineering conducted a Five-Year Review on behalf of the Port of Oakland to evaluate the performance and protectiveness of the remedy selected and implemented at the Site in 1995. The Five-Year Review was the fourth for the Site, with prior five-year reviews report being completed in December 2000, December 2006, and July 2011. As part of the Five-Year Review, Terraphase performed an inspection of the Site on March 10, 2016 that included visual observation of the concrete pavement along the exterior walls of the cinema complex and portions of the interior. There was no visible evidence of potential problems with the vapor barrier and concrete cap. The findings of the Five-Year Review indicate the remedy continues to be protective of human health and the environment.

Comments: Terraphase Engineering conducted a Five-Year Review on behalf of the Port of Oakland to evaluate the performance and protectiveness of the remedy selected and implemented at the Site in 1995. The Five-Year Review was the fourth for the Site, with prior five-year reviews report being completed in December 2000, December 2006, and July 2011. As part of the Five-Year Review, Terraphase performed an inspection of the Site on March 10, 2016 that included visual observation of the concrete pavement along the exterior walls of the cinema complex and portions of the interior. There was no visible evidence of potential problems with the vapor barrier and concrete cap. The findings of the Five-Year Review indicate the remedy continues to be protective of human health and the environment.

Completed Document Type: Operation and Maintenance Report
Completed Date: 02/26/2013
Comments: The report described activities conducted during the calendar year. Those activities included reporting for the previous annual period, cap inspections, preparation of a 5-Year Review report, replacement of an underground storage tank (UST), and cap breaches related to construction. The report found the operations at the site to be in compliance with the Operations and Maintenance (O&M) Plan and Agreement with DTSC. The report recommended removal of vegetation as part of O&M.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/20/2015
Comments: The report documented the surface cap across the site and associated repairs and improvements completed during 2014. No groundwater samples were collected this period since the sampling schedule is biannual. The report documented cleanup of light fibrous material on the site which originated from the adjacent Schnitzer Steel facility. Removal of vegetation is planned for 2015.

Comments: DTSC had the following comments 1)The photographs indicate that the cap is starting to fail. The Risk Management Plan (included in Appendix C of the Removal Action Workplan for the site dated February 22, 2002) indicates "If damage is detected in the cap, routine maintenance will be performed to correct cap damage." It is unclear how these requirements are being met. Significant pot holes were

noted and documented in Pictures 13-18. These areas must be repaired by June 30, 2017 and documentation provided to DTSC confirming the repairs by July 31, 2017. 2) In addition, other damage to the cap is documented in Pictures 19-38. As part of the upcoming 5-Year Review, the cap maintenance program should be reviewed and recommendations included to address this concern. 3) The vegetation documented in the photographs should continue to be removed and the surfaces sealed so that they do not grow back. Provide documentation of these corrections in the next annual report.

Completed Date: 12/10/2012
Comments: The 5-Year Review report summarized data collected over the last 5 years and concluded that the remedy for the Site is still protective of human health and the environment. Minor revisions to the monitoring program were recommended and approved by DTSC. Those revisions included a reduction in the monitoring schedule to a bi-annual basis for wells MW-7B and MW-8B which are nearest to the waterfront. Besides those two wells, all wells at the Site would be monitored once per 5-year period. Other modifications to the monitoring program included filtering groundwater samples prior to testing for polynuclear aromatic hydrocarbons (PAHs). Screening values for PAHs and cyanide were updated to levels protective of ecological receptors.

Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/04/2017
Comments: DTSC had the following comments 1)The photographs indicate that the cap is starting to fail. The Risk Management Plan (included in Appendix C of the Removal Action Workplan for the site dated February 22, 2002) indicates "If damage is detected in the cap, routine maintenance will be performed to correct cap damage." It is unclear how these requirements are being met. Significant pot holes were noted and documented in Pictures 13-18. These areas must be repaired by June 30, 2017 and documentation provided to DTSC confirming the repairs by July 31, 2017. 2) In addition, other damage to the cap is documented in Pictures 19-38. As part of the upcoming 5-Year Review, the cap maintenance program should be reviewed and recommendations included to address this concern. 3) The vegetation documented in the photographs should continue to be removed and the surfaces sealed so that they do not grow back. Provide documentation of these corrections in the next annual report.

Completed Document Type: Operation and Maintenance Report
Completed Date: 03/22/2012
Comments: The report documented the operations and maintenance activities including maintenance of the cap and groundwater monitoring. The cap was observed to be in acceptable condition this period and no repairs are currently planned although repairs may be scheduled since an assessment of pavement failure was conducted for which a report submittal is pending. Cap breaches during this period included activities related to replacement of an aboveground storage tank, drilling borings as part of an to assess pavement failure, repair of a water line, and construction related to installation of security cameras. The groundwater monitoring this period included testing for hydrocarbons, polynuclear aromatic hydrocarbons, and cyanide. The testing results were consistent with historical results and no increasing trends were observed.

Comments: The 5-Year Review report summarized data collected over the last 5 years and concluded that the remedy for the Site is still protective of human health and the environment. Minor revisions to the monitoring program were recommended and approved by DTSC. Those revisions included a reduction in the monitoring schedule to a bi-annual basis for wells MW-7B and MW-8B which are nearest to the waterfront. Besides those two wells, all wells at the Site would be monitored once per 5-year period. Other modifications to the monitoring program included filtering groundwater samples prior to testing for polynuclear aromatic hydrocarbons (PAHs). Screening values for PAHs and cyanide were updated to levels protective of ecological receptors.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: DTSC approved a Remedial Action Workplan in June 2011 and fieldwork was completed by September 2013. The completion report documented excavation of a portion of Jefferson Street where it dead ends at the Port of Oakland Howard Marine Terminal facility. The scope of work involved excavation of 2,500 tons of hydrocarbon impacted soil, construction debris, and abandoned utility pipes. The materials were trucked off site and properly disposed at a landfill. Liquid wastes were also generated including 94,000 gallons of water which was transported off-site to a facility for treatment. Other waste included 13.3 tons of concrete-encased asbestos containing material (ACM) in piping and 440 gallons of petroleum liquid which were recovered from the excavation and properly disposed. Part of the remedy involves maintenance of the site cap which prevents contact with contaminated soils; the cap is comprised of buildings, concrete, and asphalt surfaces around the Site which are maintained according to an Operations and Maintenance Plan. As part of the remedy a Land Use Covenant dated March 2015 (LUC) was filed with the Alameda County Recorder to restrict future use of the property to industrial usage due to residual soil and groundwater contamination including hydrocarbons, semi-volatile organic compounds (SVOCs), volatile organic compounds (VOCs), and metals. The total restricted area is 2.4 acres which is divided into 2 parcels by Jefferson Street. An additional 2 years of groundwater monitoring is planned as part of the remedy.

Comments: The Remedial Design Implementation Plan (RDIP) involves excavation of a portion of Jefferson Street where separate-phase petroleum product (SPPH) is present. The scope involves shoring, excavation of approximately 1,700 cubic yards of oil-stained soil, transport of approximately 100 truckloads, and disposal at a licensed landfill. Groundwater will be pumped from the excavation, treated and discharged or stored in tanks temporarily prior to trucking to a treatment facility. The RDIP is being implemented as part of an approved Remedial Action Plan (RAP) cleanup program which is addressing residual contamination at the Site from former power plant operations. The RAP also includes groundwater monitoring, maintenance of an impermeable cap across the Site, and land use restrictions.

Completed Document Type: Operation and Maintenance Report

Completed Date: 03/25/2016

Comments: The report summarized all activities completed during 2015 including 1) inspection and repairs of the site cap 2) groundwater monitoring. The groundwater monitoring program involved testing for hydrocarbons in shallow groundwater and only low levels of total petroleum hydrocarbons as diesel (TPHd) were detected at 120 parts per billion (ppb). Oil-adsorbent socks were placed in selected monitoring wells for recovery of hydrocarbons; hydrocarbon staining was observed on the adsorbent socks this period.

Comments: The document summarized field activities conducted from December 17-21, 2012. Two test pits were dug and fuel pipelines were inspected and found to be in good condition. Soil conditions were observed to check for properties like density and groundwater saturation. Air monitoring related to contamination from the historical power plant operations was conducted in order to develop odor mitigation strategies for the future planned excavation in the street area (Jefferson Street). Groundwater and soils which were generated as part of the investigation was tested and found to be non-hazardous; and were properly disposed at licensed facilities.

Comments: DTSC approved a Remedial Action Workplan in June 2011 and fieldwork was completed by September 2013. The completion report documented excavation of a portion of Jefferson Street where it dead ends at the Port of Oakland Howard Marine Terminal facility. The scope of work involved excavation of 2,500 tons of hydrocarbon impacted soil, construction debris, and abandoned utility pipes. The materials were trucked off site and properly disposed at a landfill. Liquid wastes were also generated including 94,000 gallons of water which was transported off-site to a facility for treatment. Other waste included 13.3 tons of concrete-encased asbestos containing material (ACM) in piping and 440 gallons of petroleum liquid which were recovered from the excavation and properly disposed. Part of the remedy involves maintenance of the site cap which prevents contact with contaminated soils; the cap is comprised of buildings, concrete, and asphalt surfaces around the Site which are maintained according to an Operations and Maintenance Plan. As part of the remedy a Land Use Covenant dated March 2015 (LUC) was filed with the Alameda County Recorder to restrict future use of the property to industrial usage due to residual soil and groundwater contamination including hydrocarbons, semi-volatile organic compounds (SVOCs), volatile organic compounds (VOCs), and metals. The total restricted area is 2.4 acres which is divided into 2 parcels by Jefferson Street. An additional 2 years of groundwater monitoring is planned as part of the remedy.

Comments: The Remedial Design Implementation Plan (RDIP) involves excavation of a portion of Jefferson Street where separate-phase petroleum product (SPPH) is present. The scope involves shoring, excavation of approximately 1,700 cubic yards of oil-stained soil, transport of approximately 100 truckloads, and disposal at a licensed landfill. Groundwater will be pumped from the excavation, treated and discharged or stored in tanks temporarily prior to trucking to a treatment facility. The RDIP is being implemented as part of an approved Remedial Action Plan (RAP) cleanup program which is addressing residual contamination at the Site from former power plant operations. The RAP also includes groundwater monitoring, maintenance of an impermeable cap across the Site, and land use restrictions.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

EDR HIGH RISK HISTORICAL RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
